DNSFILTER HAS ACQUIRED GUARDIAN APP

DNSFilter has acquired Guardian, a leading Firewall + VPN technology platform. The acquisition allows DNSFilter to provide a robust Secure Web Gateway (SWG) that more effectively protects user information and secures organizations against web-based threats.

Guardian will be integrated into the DNSFilter app in 2023 to deliver SWG capabilities such as IP filtering, URL filtering, and port filtering. This will expand our AppAware directory for easy one-click blocking of risky applications.

We're invested in improving security and privacy for enterprise organizations. Together, DNSFilter and Guardian will provide a robust security experience with a more expansive feature set and the customization necessary for complex network architecture.

DNSFilter + Guardian
