WHAT’S NEW 2022

DNSFilter is DNS security built for MSPs. We understand the importance of easy deployments and configurability all while protecting your end users from well-camouflaged malicious sites.

We understand that MSPs have a lot to juggle. Between deploying new customers, reconfiguring existing deployments, and dealing day-in and day-out with setups wholly unique to each client, you need features that will help you with a range of implementations.

NEW

DATA EXPORT

Our Data Export feature allows customers to export data from DNSFilter to another tool in near real-time. This external tool can be a data store, data visualization service, analytics service, logging service, and more. This ability opens a whole new world of custom integrations and data analysis that can help customers with decision making, network troubleshooting, and building extensions on top of the core DNSFilter features.

APPAware

Increase security and boost productivity with AppAware’s application blocking and usage intelligence features. We’ve curated the 100 most high-risk applications for one-click blocking, and added reporting to provide intelligence and insights into the usage of the applications throughout your organization. You can now make data-driven decisions on the applications used within your organization.

SINGLE SIGN-ON - SSO

Our SSO feature enables you to securely access your DNSFilter account with a single click by taking advantage of third-party identity providers like Okta and Azure AD that support the OpenID Connect (OIDC) protocol. OIDC is an identity layer built on top of OAuth 2.0 that helps authenticate and authorize users by allowing client applications to confirm an end user's identity using authentication facilities provided by an authorization server.

ZAPIER

Want to perform automated tasks based on events happening on your DNSFilter account? With 13 triggers to choose from, you can initiate workflows and send DNS data to over 3000 applications. You can get automated alerts when customers encounter a deceptive site, hit a block page, or when an administrator adds (or removes) a new Roaming client. Our Zapier integration helps you manage repetitive tasks by setting up automation to handle events you need to monitor.

WEBSHRINKER

Our domain Intelligence tools have categorized more than 563 million websites, and re-scan the web every 5 days. No other service detects and categorizes new sites faster than Webshrinker. Also, unlike other feeds, Webshrinker uses image and logo scanning technology to detect fresh scams. Our data powers web filtering, endpoint protection, rich ad targeting, and contextual safety for millions of users worldwide.

INSIGHT REPORTING

Uncovering anomalies, monitoring network behavior, discovering who wins the “most-likely-to-visit-a--phishing-site” award - that is what you’re able to do with good reporting. DNSFilter’s insights reporting provides you with visibility into your network as well as the ability to drill down to more granular details. Discover trends among your customers and don’t miss a surge in suspicious behavior.

ACTIVE DIRECTORY INTEGRATION

It’s easier to manage policies when you can use what you already have in place. Our Sync tool gives you the ability to directly integrate with Active Directory and Azure Directory, with a fully automatic sync of both security and dynamic groups. Apply policies at both group and user levels and automatically handle personnel changes.
DNSFILTER HAS ACQUIRED GUARDIAN APP

DNSFilter has acquired Guardian, a leading Firewall + VPN technology platform. The acquisition allows DNSFilter to provide a robust Secure Web Gateway (SWG) that more effectively protects user information and secures organizations against web-based threats.

Guardian will be integrated into the DNSFilter app in 2023 to deliver SWG capabilities such as IP filtering, URL filtering, and port filtering. This will expand our AppAware directory for easy one-click blocking of risky applications.

We’re invested in improving security and privacy for enterprise organizations. Together, DNSFilter and Guardian will provide a DNS security experience with a more expansive feature set and the customization necessary for complex network architecture.

DNSFILTER FEATURES

**IP FILTERING**
Control the IP traffic on your network

**DATA EXPORT**
SIEM integration with Amazon S3, Splunk, and more

**SINGLE SIGN ON**
Securely access DNSFilter

**URL FILTERING**
Filtering beyond the domain level

**APPAWARE**
One-click Application Blocking

**INSIGHT REPORTING**
Detailed reports, with scheduled reports arriving fall 2022

WE’RE EXCITED FOR GUARDIAN TO JOIN THE DNSFILTER SUITE OF PRODUCTS
